Art Unit: 3729

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 and 17 are 35 U.S.C. 103(a) as being unpatentable over Pelligrino (Pat No 4,606,787).

Pelligrino teaches a method for making high density multilayered printed circuit boards wherein conductive circuit patterns are embedded and are integral with insulating material, such that the surface of the circuit pattern is exposed along the surface of the substrate and lays flush there. At least two (2) boards are stacked. The assembly is heat-pressed together to form a homogeneous block of insulator material and having conductive circuit patterns embedded therein.. Figure 14 depicts a lead hole or interconnect which can be provided for the multilayered circuit board. By established legal precedent, it is unnecessary for prior art to show any steps which are performed for a proper rejection of a product-by-process claim and therefore if Pelligrino does not anticipate these claims the evidence in this prior art surely makes these product claims obvious..

Claims 1-15 are held to be allowable.
